

I am in full support of the comment submitted by The American Radio Relay League concerning Docket ET 03-104. Much more research must be done before we can allow the proponents of Broadband over Power Line (BPL) to just use this technology as is. Initial testing being done have already shown the interference to services licensed to operate in the 2 MHz - 80 MHz frequency range, which includes the amateur radio frequency bands. As a ham radio operator, I have use the frequency bands to provide emergency communications for the general public. Approval of ET 03-104 would violate the existing FCC rules on non-interference and would be contrary to the best interest of the public.
